HDFC is the best stock for long-term investment

It is the only stock contributing 100% of portfolio returns, with a positive avg return and manageable volatility of 0.011 — making it the most reliable long-term hold among the three.

May–June is the peak window for trading activity

All three stocks spike to ~8M volume in months 5–6, up from a ~6M baseline — the best time for high-liquidity trades with tighter spreads across HDFC, Infosys, and Reliance.
